

Broward County Equity Initiative

Empowering a New Generation
of Americans

## About Hispanic Unity of Florida

Our mission is to empower immigrants and other members of the community to become self-sufficient, civically engaged, and to lead productive lives.

## BACKGROUND

Since its founding, America has been a beacon for those seeking freedom and opportunity. Welcoming newcomers to our country and guiding them on their often difficult, but always hopeful, life-long process of becoming an American, is at the heart of Hispanic Unity of Florida's (HUF) work.

Founded in 1982, HUF guides aspiring Americans on their journey to achieving their American dream and supports the acculturation process. Today, HUF is Broward County's largest 501(c)3 dedicated to South Florida's immigrant population. The agency has left an indelible mark on more than 500,000 individuals and families since its founding 40 years ago.

HUF supports south Florida's diverse community through 12 programs, which offer more than 30 services in four languages. Nearly two-thirds of its clients come from Latin nations and the Caribbean, as well as American-born clients with roots in Black, Haitian and Hispanic cultures. HUF advances and accelerates the pace of social and economic stability through its family-centered, multigenerational approach. Its integrated services provide a seamless framework for social mobility that includes immediate assistance and long-term solutions through a racial equity lens. It provides Language \& Education, Economic Mobility \& Entrepreneurship, and Citizenship \& Civic Engagement on three main campuses, and offers extended services such as Health \& Well Being, Equal Treatment \& Opportunity, and Advocacy at more than 50 partner locations. On average, HUF serves more than 15,000 children and families annually.

Successful Children | Strong Families | Civically Engaged Citizens Inclusive \& Equitable Communities

## EDUCATION

- Unity 4Kids (U4K) Early Learning Center: 5-Star Rated, NationallyAccredited Licensed Pre-K \& VPK for 3- to 5-Year-olds
- Unity 4Teens(U4T) Program: Year-round After-School \& Summer-School Program for Youth ages 11- to 18
- English for Speakers of Other Languages (ESOL)
- Family Strengthening Program: Research-based parent-education program that teaches parents the importance of engaging in nurturing behavior promoting healthy physical and emotional development in children.

## ECONOMIC DEVELOPMENT

- Center for Working Families (CWF): Comprehensive one-stop shop that consists of public benefits assistance, employment services and money management assistance.
- Pathway to Homeownership: Program to learn all the steps necessary to purchase a home, rent a property and foreclosure prevention
- Emerging Entrepreneurs (EE) Program: Workshops in Spanish for Existing \& Emerging Small Business Owners
- Volunteer Income Tax Assistance (VITA) Program is a Free Tax Preparation Service
-Health and Public Benefits Income Support

## CIVIC ENGAGEMENT

- Immigration Services
-Pathways to Citizenship Program and Naturalization Assistance Free Immigration Consultations through Americans for Immigrant Justice (AIJ)
- Voter Registration and Engagement
- Legal Consultation and Referrals (in partnership with Legal Aid Service of Broward County)

## PUBLIC POLICY \& ADVOCACY

- Seeking long term solutions through public policy and advocacy to the issues affecting our clients and community in the areas of healthcare, education, economic sustainability, and immigration.

## SOUTH FLORIDA'S UNIQUE STORY

While today's immigrants may look and dress differently, their motivations parallel their ancestors. New immigrants still must overcome the same challenges, including learning the language, understanding the culture, and establishing economic stability.

South Florida's geographic location makes it a popular destination for Caribbean and Latin American immigrants. With every new wave of immigrants, the community grows and changes, assuming qualities from its new residents that become engrained in the character of the area. Today, South Florida's community is a colorful and vibrant mixture of cultural traditions, cuisine, and musical influence All the while, HUF has proudly served as South Florida's Ellis Island welcoming newcomers and guiding them on their American dream journey.

The main hall at Ellis Island, New York

Immigrant children arriving at Ellis Island, New York.

Integration for new immigrants is a decades long process. It takes years to reach a productive level of acculturation - mastering the language, having an understanding of the country's financial, health and education systems, even finding a support network before immigrants fully assimilate into their new home country. Financial stability, asset acquisition, advanced degrees, the start of a small business or purchase of a home take even longer.

While 76 percent of Latinos are U.S citizens or have other legal status, many do not. It is very common for immigrants to live in mixed status families, which adds an additiona burden with no direct solution without changes to the country's immigration laws. Hispanic Unity of Florida's mission and programmatic work focuses on filling the gaps that exist in racial and ethnic communities, such as gaps in education attainment, economic success, access to healthcare, and affordable housing

THE

## JIM MORAN FOUNDATION

"THE FUTURE BELONGS TO THOSE WHO PREPARE FOR IT",

The mission of The Jim Moran Foundation is to improve the quality of life for the youth and families of Florida through the support of innovative programs and opportunities that meet the ever-changing needs of the community.

The BROWARD COUNTY EQUITY INITIATIVE: The State of Hispanic and Immigrant Broward report provides an analytical framework to advance racial equity in Broward County by identifying challenges \& opportunities facing Hispanic and immigrant families. The findings of this report will influence critical conversations about racial equity and transformative, long-term solutions in our community

## ACKNOWLEDGMENTS

HUF would like to thank all individuals and organizations involved in this research project and, more specifically, to the authors and reviewers that took part in the review process. Without their support, this report would not have become a reality.

For years, HUF has partnered with the Urban League of Broward County (ULBC) on economic prosperity related initiatives. This approach was designed to help individuals and families strengthen their financial position and support financial stability. Thank you ULBC for your partnership and support. We will continue to be a "Force for Good" together.

## THANK YOU TO THE HUF FAMILY

## Jorge M. Pérez Metropolitan Center

## About the Jorge M. Perez Metropolitan Center

The Florida International University Jorge M. Perez Metropolitan Center is Florida's leading urban policy think tank and solutions center. Established in 1997, the Center provides economic development, strategic planning, community revitalization, and performance improvement services to public, private, and non-profit organizations in South Florida. Its staff and senior researchers are leaders in their respective fields, and bring extensive research, practical, and professional experience to each project. The Center's research has catalyzed major policy initiatives, and projects in housing, economic redevelopment, transportation, social services, and health services throughout South Florida.

FOREWORD
Reclaiming the American Dream
Thirty-four percent of Broward County's residents are foreign born. By 2040, 52 percent of the population in Southeast Florida will be Hispanic. When we see these statistics, we must ask ourselves: Will our Hispanic and immigrant families be living the American dream, or will they be struggling to close disparities in education and economic success? Will they be civically engaged and have representation throughout our democratic system?

The story of Broward County's immigrant community is linked to the larger historical narrative of the United States and to the "Mother of Exiles" (as the Statue of Liberty is often referred to.)

Felipe Pinzon President \& CEO

For centuries, immigrants journeyed to America in the hopes of building better lives for themselves and their families. The classic tale of immigrants who survived inhumane conditions on ships, arrival at Ellis Island and struggled to assimilate into American culture is a shared history across races and ethnicities.

The history of Broward County's Hispanic and immigrant communities has yet to be fully documented. In the 1960s, immigrant families began to make their mark on south Florida. By the 1980s, when HUF was founded, the county witnessed its first meaningful influx of immigrants following the Mariel Boatlift, a mass migration of Cuban refugees to America, and growing social unrest throughout Latin America. By the 1990s, Hispanics numbered exceeded 100,000 and surpassed 600,000 by 2010. Today, more than 34 percent of the county's residents are foreign born - many of whom are Latinos.

In 2020, the COVID-19 pandemic caused deep and far reaching economic and community impacts, wreaking havoc on Hispanic and immigrant workers due to being overrepresented in industries that were hit hardest by the pandemic. Evidence indicates the pandemic's economic burden borne by Black, Hispanic and immigrant workers severely and disproportionately set these groups at a disadvantage.

The State of Hispanic and Immigrant Broward report provides an opportunity for all to pause and reflect on the story of Hispanic and immigrant communities within Broward County, how it has unfolded over the decades, and where we stand today as we plan for a more diverse, equitable, and inclusive future.

In celebration of our 40th anniversary, HUF partnered with the Jorge M. Pérez Metropolitan Center at FIU and the Urban League of Broward County to launch the State of Black Broward and the State of Hispanic and Immigrant Broward initiatives, to advance equity and support for Broward Families study.

## Study Goals

The State of Hispanic and Immigrant Broward report provides a snapshot of the Hispanic and immigrant population in our community. In its essence, it is a tool that measures the existing disparities between racial and ethnic groups in Broward County and encourages action. The goal is to develop an objective tool for data analysis used by government, business, civic, community, and grassroots leaders to prepare for a more equitable future.

The study has three primary objectives:

- Data and Information - Provide objective data on key economic and social issues for the local area.
- Analysis and Benchmarks - Provide data that can show trends over time based on actions or non-actions.
- Call to Action - Provide an opportunity for stakeholders to engage the community in dialogue and to consider policy recommendations.

It is our intention to develop the State of Hispanic and Immigrant Broward report through a lens of equity that recognizes the intersectionality of these systems and their impact on the lives of Broward County residents. Equity is defined as the state, quality, or ideal of being just, impartial and fair. The concept of equity is synonymous with fairness and justice. In essence, a locality (county, city) achieves racial equity when race and ethnicity no longer determine one's socioeconomic outcomes and when everyone has what they need to thrive, no matter where they live. Essentially, equity involves trying to understand and give people what they need to enjoy full and healthy lives in the communities of their choice. According to the Race Matters Institute, "the route to achieving equity will not be accomplished through treating everyone equally, rather by treating everyone equitably, or justly according to their circumstances."

Our hope is that collectively, we - families, business, government, faith, and community groups - can truly advocate for game-changing policies that address social and economic barriers impacting our children and adults. We want to inform strategy and identify the resources necessary to help our community achieve long-term, positive life outcomes.

Join us and be a Force for Good!
Felipe Pinzon
President \& CEO
Hispanic Unity of Florida

## INTRODUCTION AND EXECUTIVE SUMMARY

The State of Hispanic and Immigrant Broward provides the analytical framework for the 2021 Broward Equity Initiative. The analysis, performed in tandem with the State of Black Broward provides a comprehensive, holistic analysis of key population, economic, and social trends, factors, and conditions that allow for an informed discussion on racial and ethnic equity and disparity issues facing Broward County and its municipalities. The analysis connects various socioeconomic indicators and provides the underpinnings for the subsequent "Broward Equity Plan of Action", which addresses the barriers and opportunities for meaningful community and human development policymaking.

## Approach and Methodology

The State of Hispanic and Immigrant Broward is a data-driven assessment. The methodology for the report includes a detailed data and trend analysis of each of the following topic areas:
a. Population and Demographic Trends
b. The Economy
c. Public Education
d. Public Health
e. Housing
f. Criminal Justice and Safety
g. Voter Engagement

The analysis is based on a variety of public and proprietary data sources to provide the most thorough analysis of the County's and individual municipality's demographic, economy, public health, crime, and voting trends. Data sources include the U.S. Census, American County Survey, Florida Department of Economic Opportunity (DEO) Quarterly Census of Employment and Wages (QCEW), Current Employment Statistics (CES), Local Area Unemployment Statistics (LAUS), Occupational Employment Statistics and Wages (OES), EMSI, Consumer Financial Protection Bureau (CFPB), Florida Department of Health, the Center for Disease Control, Florida Department of Corrections, Florida Department of Law Enforcement, Broward County Public Schools, National Center for Educational Statistics, and the Broward County Supervisor of Elections.

## Analysis and Findings

The report found Broward County has experienced dramatic demographics shifts in the past thirty years marked by rapid suburbanization in the 1990s, a general aging of the White population and steady migration of Hispanic or Latino, Black or African American, and newer immigrant populations over the past two decades.

It is evident that racial and ethnic divides and disparities continue to persist despite laws that were enacted to prohibit segregation and discrimination. Sadly, the COVID-19 pandemic highlighted for all to see the disparities and inequities that continue to exist in Broward County and the nation. Evidence indicates the health, economic, and community impacts of the pandemic has been borne disproportionately by minority populations, individuals and families living in poverty, and noncitizen immigrants. The economic burden of the pandemic has also fallen more heavily on minority workers and business owners.

The State of Hispanic and Immigrant Broward and forthcoming "Broward Equity Plan of Action" provide an opportunity for all community leaders to raise the standards in matters of equity and inclusion. According to the Racial Equity Institute, "racial equity demands that we pay attention not just to individual-level discrimination, but to overall social outcomes." This contrasts with the current state of affairs in which a person of color is more likely to live in poverty, be imprisoned, drop out of high school, be unemployed, and experience poor health outcomes and lack access to safe, decent, and affordable housing.

The following is a summary of the State of Hispanic and Immigrant Broward's key findings:

## Population and Demographics Trends

The report found that Broward County's recent population growth is being driven by Hispanic and Black migration patterns. Since 2015, Broward County’s most significant population increases were among Hispanic or Latinos (15.6 percent/77,298 persons) and Black or African Americans (7.4 percent/38,010 persons). Broward County's majority White population (60.7 percent) has grown by only 4.5 percent/15,948 persons. Hispanic or Latino and Black or African American persons now comprise 29.8 percent and 28.6 percent of Broward County's population, respectively. Significantly, Broward County's workforce age population (20-55 years of age) has become increasingly Hispanic or Latino and Black or African American.

Broward County's Hispanic or Latino population is very diverse based on nationality. Cubans (20.7 percent) comprise the largest percentage of the County's Hispanic or Latino population followed by Puerto Ricans (15.4 percent), and Colombians (14.6 percent). According to the 2019 ACS, the fastest growing Hispanic or Latino populations in the last five years includes Cubans (24,320 persons/25.8 percent growth rate), Venezuelans (17,649 persons/63.8 percent growth rate), and Dominicans ( 6,995 persons/22.3 percent growth rate).

Broward County's Hispanic or Latino and Black or African American populations reside throughout the County. However, concentrations of both population groups are evident based on historical settlement and newer migration patterns. Concentrations of Black or African American residents are mostly found in established Black communities and neighborhoods, while Broward County's growing Hispanic or Latino population is more concentrated in newer suburban locations.

## The Economy

Strong, equitable, and inclusive economies deliver broad-based prosperity to their residents by providing Stable Long-Term Growth Economic Opportunity, Economic Mobility, and Economic Equity. Prosperity can be achieved when regardless of where one starts on the economic ladder, individuals and families can improve their economic conditions and build wealth, and where the benefits of economic growth are shared by residents across the income spectrum and where they live.

The State of Hispanic and Immigrant Broward report found clear evidence of persistent concentrations of income inequality in Broward County's Hispanic and Black communities. Income inequality has resulted in low median household and per capita incomes, higher poverty and unemployment rates.

- The median household income of Hispanic or Latino households is at 87 percent of White households.
- The percentage of Hispanic or Latino families with children living in poverty is twice as high as White families and nearly four times higher among Black or African American families.
- Significantly, the labor force participation rates for Broward County's Hispanic or Latino (71.6 percent) and Black or African American (71.0 percent) populations are much higher than Broward County's White, Non-Hispanic ( 58.9 percent) population and that of the U.S. ( 61.8 percent).

## Public Education

According to the National Equity Project, "educational equity means that each child receives what they need to develop to their full academic and social potential". Equity in education is the process of reforming practices, policies, and procedures at the school and district levels to support academic fairness and inclusion, and ensure that every child has the resources, teachers, interventions, and supports they need to be successful.

According to the Washington Center for Equitable Growth, education is one of the most important long-term drivers of both economic growth and equity. Education adds to human capital (the education, training, and health of workers) thereby increasing labor productivity and the value of the worker. The quality of education that students receive also directly correlates to their quality-of-life years down the road. Early education, in particular, has the power to shape a child's future and provide them with more resources. It is for these reasons that it's crucial for local educators to address any barriers young students face to succeeding in school.

The State of Hispanic and Immigrant Broward report found Broward County Public Schools are more racially diverse than Broward's overall population. Significantly, Hispanic or Latino and Black or African American graduation rates have significantly improved in the last ten years. However, "unexcused absences" are significantly higher among Hispanic or Latino and Black or African American students than White students.

The report found significant disparities in:

- Advanced Placement (AP) Exams passing scores between White
students and Hispanic or Latino and Black or African American students.
- Most of Broward County Public Schools graded as C or D are located in communities with high concentrations of Hispanic or Latino and Black or African American populations. This includes 22 of the "2021-2022 Lowest 300 Performing Elementary Schools" in the state.

## Public Health

According to the National REACH Coalition, "equitable health care means that all individuals have access to affordable, high quality, culturally and linguistically appropriate care in a timely manner. This includes health care quality; patient education and empowerment; health care infrastructure; health care policy, and program administration."

Equitable health care in Broward County is being impacted by a variety of economic and social factors including poverty and the lack of affordable housing. Lower income households are often forced to choose between health care and buying food, medicine, and paying the rent.

The State of Hispanic and Immigrant Broward report found a wide disparity in infant mortality rates among Broward County’s Hispanic or Latino and Black or African American populations than the White population.

According to the Florida Department of Health, there are substantially higher HIV and AIDS infections and deaths among Broward County's Hispanic or Latino and Black or African American residents than Whites. However, while HIV diagnosis rate among Broward County’s Black or African American population has decreased from 90.1 per 100,000 population in 2010 to 50.9 in 2019

- HIV diagnosis rate among Broward County's Hispanic or Latino population has increased from 30.8 per 100,000 in 2010 to 36.0 in 2019. While the percentage of Broward County's uninsured Hispanic or Latino and Black or African American populations has decreased in the last five years.
- Hispanics or Latinos are three times more likely to be uninsured (18.2 percent) vs the county's uninsured ( 5.9 percent) white population. And Black or African American uninsured (10.1 percent) levels are double of the County's uninsured ( 5.9 percent) White population.

## Housing

The availability of quality affordable housing is critical in creating diverse and inclusive cities and counties. Affordable, safe, quality housing can provide the anchor for nearby jobs, education, public transportation, and health care. This should matter to cities and counties, not just on equity grounds, but because healthier and more educated residents benefit the local economy by forming a more robust and productive workforce.

Housing affordability also affects educational performance and attainment and the quality health care. Households with better affordability ratios generally have higher rates of savings, more cash, and/or higher levels of equity (in an owned home) that can be applied to education spending for their children. Cost burdened families are also more prone to unexpected health expenses that can throw a family into foreclosure or eviction.

- The State of Hispanic and Immigrant Broward report found higher levels of cost-burden and overall housing distress (i.e., age, condition) in less affluent Hispanic or Latino and Black or African American communities.
- The report found homeownership rates are significantly lower among and Hispanics or Latinos and Black or African Americans than Whites. The report also found significant fair housing and lending issues in Broward County.
- Hispanic or Latino and Black or African American home purchase-Ioan denial rates are much higher than White applicants. High-cost owneroccupied home purchase loans are also more prevalent among Hispanic or Latino and Black or African American applicants than White applicants.

## Criminal Justice and Safety

Racial justice is the systematic fair treatment of people of all races that results in equitable opportunities and outcomes for everyone. A just and equitable criminal justice system allows all people to achieve their full potential in life, regardless of race, ethnicity, or the community in which they live. According to the Opportunity Agenda, "an equitable criminal justice system should ensure that all individuals feel safe and secure in their communities and be administered in a fair and just manner with a commitment to equal treatment and accountability."

- The State of Black Broward report found that Broward county's overall arrests declined by 39.3 percent since 2011. Most crime activity by type in 2020 included drug arrests $(4,226)$, larceny $(2,678)$, simple assault $(1,917)$, and DUI $(1,064)$.

According to the Florida Department of Juvenile Justice's 2020 Delinquency Profile Dashboard, Broward County ranked 4th in Juvenile intake-arrests (2,735 arrests). Juvenile arrests were down 61 percent in Broward County and 54 percent statewide from 2015 to 2020 due in part to the COVID-19 pandemic. However, juvenile intakearrests in Broward County by race showed a significant disparity between White and Black. In 2020, 71 percent $(1,955)$ of juvenile arrests were Black compared to 11 percent ( 310 arrests) among White juveniles. Hispanics comprised 16 percent (449) of arrests. Statewide, 51 percent of juvenile arrests were Black, 33 percent white, and 16 percent Hispanic youth. A further analysis of juvenile arrest activity in Broward County, shows the highest volume of juvenile arrests occurred in Broward County zip codes with high concentrations of Blacks or African Americans.

## Voter Engagement

Voting is the most basic right in our democracy, but too many people, especially people of color, are often locked out of the process through Jim Crow type voter suppression laws. As the cornerstone of American democracy, a fair and equitable election system would remove persistent barriers to voting and work towards a strong and modern voting system where all eligible citizens are motivated to vote, can do so with ease, and can reasonably trust that election outcomes are legitimate. The on-going struggle for racial justice has been put to the test in recent years. U.S. Supreme Court ruling in the 2013 Shelby County v. Holder Case has made it easier for states to pass voter restriction laws. The report found 361 bills have been filed in 47 states that would limit mail, early in-person, and Election Day voting with such constraints as stricter ID requirements, limited hours, and narrower eligibility to vote absentee. In Florida, on May 6, 2021, Florida legislators passed into law with immediate effect. The law will make it harder for Floridians to cast a ballot by mail, force voters to submit vote-by-mail requests more often than is currently required and eliminate secure vote-by-mail drop boxes.

The State of Hispanic and Immigrant Broward report found Broward County's voting age population has increased by 20.5 percent since 2008 (192,476 voters). The County's White voting age population has decreased by 8.2 percent ( 48,828 voters).

- The County's Hispanic or Latino and Black or African American voting age populations have increased by 98.8 percent/141,935 persons and 46.7 percent/ 98,569, respectively.

The report found significant growth in Broward County's Hispanic or Latino and Black or African American voter age population since 2008. Broward County's voter turnout in the 2020 election was significantly higher by race and ethnicity than other recent elections.

## II. POPULATION AND DEMOGRAPHICS TRENDS

Broward County has gone through dramatic demographics shifts in the past sixty years marked by rapid suburbanization, a general aging of the White population, and a steady migration of Hispanic or Latino and Black or African American populations over the past two decades.

## POPULATION BY AGE, GENDER, RACE, AND ETHNICITY

Broward County's population dramatically increased in recent decades as the suburbanization of the County rapidly accelerated from the 1960s on. From 1960 to 2000, Broward County's population grew by 1,289,072 persons. Since 2000, and with near build-out Broward County's population growth has slowed. From 2000 to 2019, the County's population has increased by 303,187 persons.

Since 2015, Broward County's overall population has increased by 4.5 percent ( 83,063 persons). The most significant population increases were among Hispanic or Latinos (15.6 percent/77,298 persons) and Black or African Americans (7.4 percent/38,010 persons). Broward County's majority White population (60.7 percent) grew by only 1.4 percent/ 15,948 persons. Hispanic or Latino and Black or African American persons now comprise 29.8 percent and 28.6 percent of Broward County's population, respectively.

The gender mix of Broward County's Hispanic or Latino (49 percent male/51 percent female) and Black or African American (47 percent male/53 percent female) populations are representative of Broward County's overall population (49 percent male/51 percent female). However, in the last five years the male population has slightly increased across all population groups.

The gender mix of Broward County's immigrant populations, both naturalized (45 percent male/55 percent female) and non-U.S. citizens (49 percent male/51 percent female), are also representative of other population groups.

[^0]Broward County's Hispanic or Latino and Black or African American populations reside throughout the County. However, concentrations of both population groups are evidently based on historical settlement and newer migration patterns. Concentrations of Black or African American residents are mostly found in established Black communities and neighborhoods, while Broward County's growing Hispanic or Latino population is more concentrated in newer suburban locations.

[^1]

Broward County's overall population has been aging over the last 10 years. The share of the population ages 55 to 64 years and 65+ has been gradually increasing while the share of all population age groups from under 5 years to 54 years have been steadily decreasing. However, an analysis of Broward County's population age by race and ethnicity shows significant variations in population ages.
According to 2019 ACS estimates, 42.9 percent of Broward County's White alone, not Hispanic population is 55+ years of age compared to 21.5 percent of the County's African American or Black population and 22 percent of the Hispanic or Latino population. Broward County's overall population also shows large variations in all younger age categories. Only 28 percent of the County's White alone, not Hispanic population fall in the 5 to 19 and 20 to 34 age categories compared to 49.5 percent of the County's African American or Black population and 52.3 percent of the Hispanic or Latino population.

## III. THE ECONOMY

Per Capita Income by Race
Strong, equitable, inclusive economies deliver broad-based prosperity to their residents by providing: Stable Long Term Growth - job and employment growth that is less susceptible to wide and/or rapid declines, so that household wealth and income is protected during national economic downturns and shocks as recently experienced with the COVID-19 pandemic and prior "Great Recession"; Economic
Opportunity in the form of a variety of jobs and occupations paying competitive
wages and incomes that increase rapidly with improved skills and experience;
Economic Mobility - regardless of where one starts on the economic
ladder, individuals and families can improve their economic

## Strong, equitable

inclusive economies
deliver broad-based
prosperity to their conditions and build wealth; and Economic Equity - growth residents whose benefits are shared by residents across the income spectrum and where they live.

The following analysis addresses each of the prosperity indicators in determining the presence and extent of racial disparities and inequities in Broward County's economy.

## HOUSEHOLD AND PER CAPITA INCOME

Broward County's median household and per capita incomes, like most
metropolitan areas in the U.S., have not kept up with sharp increases in the cost of living driven primarily by rapidly increasing housing costs and exacerbated by several decades of stagnant wages.

According to American Community Survey (ACS) estimates, there are significant disparities in median household income among White, Hispanic, and Black households. In fact, the disparity in the median household income between White and Black or African American households has widened in the last 10 years According to 2019 ACS estimates, the median household income of Blacks is only 71 percent of White households. The median household income Median of Hispanic or Latino households is 87 percent of White households.
household
Per capita income provides a general gauge of rising standards of living in an economy though isn't normally used as a measure of income disparities. However, in Broward County significant disparities do exist in per capita income by race and ethnicity. According to 2019 ACS estimates, the per capita income of Blacks or African Americans and Hispanic or Latinos are 48 percent, and 59 percent of Whites, respectively.
income of Hispanic is only $87 \%$ of Whites

## POVERTY

There is a growing sense of urgency to improve policy and programmatic outcomes in urban neighborhoods with persistently high concentrations of poverty In fact, studies have found that poor individuals and families are not evenly distributed across communities or throughout the country. A 2014 report by City Observatory provided data that confirms the strong persistence of high poverty over time. The report found that two-thirds of the high-poverty census tracts in 1970 were still high-poverty neighborhoods forty years later. Why are these numbers important? The concentration of poverty results in poor housing and health conditions, higher crime rates, underperforming public schools, as well as limited access to private services and job opportunities.

The Vicious Cycle of Poverty

According to ACS estimates, poverty among Broward County's Hispanic or Latinos and Black or African Americans has significantly decreased since 2010. However, Black or African American and Hispanic or Latino persons living in poverty remains significantly higher than White persons

Families with children living in poverty is also disproportionately higher among Blacks or African Americans and Hispanics or Latinos than Whites. Hispanic or Latino families with children living in poverty is twice as high as Whites and nearly four times higher among Black or African Americans.
Persons in Poverty by Race

Broward County's highest poverty rates and overall levels of distress are concentrated in communities largely comprised of African American or Black residents and/or Hispanic or Latino residents. Poverty rates in these communities are far in excess of the County's overall poverty rate of 12.2 percent. Communities with excessive poverty rates above 20 percent include Pembroke Park ( 23.6 percent) Lauderdale Lakes (22.5 percent), North Lauderdale, (22.0 percent), West Park, (21.9 percent), and Lauderhill (20.9 percent).

## Hispanic or Latino families with children Ilving in poverty is twice as high as Whites and nearly four times higher among Black or African Americans.

## Broward County COVID-19

 Community Distress Index (CDI)The Jorge M. Pérez FIU Metropolitan Center's Community Distress Index (CDI) is composed of four sub-indices - Socioeconomic Status; Household Composition \& Disability Status; Minority Status \& Language; and Housing \& Transportation - and 20 measurable indicators. The model identifies and maps (see above), via identifies and maps (see above), via
data layering, baseline economic and social conditions according to established neighborhood boundaries. The model then identifies and connects distress factors (economic and social) by neighborhood to create a composite "Community Distress Index" (CDI). The CDI categorizes the types and levels of distress within a defined subgeography providing an analytical tool for designing appropriate response strategies.

The CDI for Broward County shows high level of community distress in parts of north, central, and south Broward with concentrations of Black or African American and Hispanic and Immigrant populations. The primary community stressors include low income, lack of educational attainment, and housing affordability.

Labor force participation is an important economic indicator as it shows the percentage of civilian workers 16+ years of age who are either employed or looking for work. The current (September 2021) U.S. labor participation rate of 61.6 percent reflects a slow COVID-19 pandemic economic recovery as millions of Americans still remain sidelined from the job market. This is significant as unemployment benefits for millions of Americans ended in September 2021, but wasn't enough to bring many people back into the labor force.

The overall decline in the labor participation rate since the Great Recession has been largely due to the aging of the population, especially among White workers. Another factor cited is the pre-COVID absence of family-friendly policies in the United States as a key reason for the decline in the overall labor force participation rate and a stalling out of women's labor force participation.

According to the 2019 ACS, the labor force participation rates for Broward County's Hispanic or Latino (71.6 percent) and Black or African American (71.0 percent) populations are significantly higher than the U.S. and Broward County’s White, NonHispanic (58.9 percent) population.

## EMPLOYMENT RATES

Pre-COVID, unemployment rates in Broward County had been steadily declining since the Great Recession. However, the unemployment rates among Blacks or African-Americans and Hispanics or Latinos were significantly higher than Whites. In the early months of the COVID pandemic, unemployment rates soared to 17.4 percent in Broward County. Job loss was especially acute in Hispanic or Latino and Black or African American communities with high concentrations of frontline service sector workers. While Broward County's September 2021 unemployment rate is down to 4.9 percent, unemployment rates remain higher in communities with high concentrations of service sector workers

## EMPLOYMENT BY OCCUPATION

Broward County is largely a service sector economy comprising over 90 percen of all employment. Leading service providing sectors include educational and healthcare services (108,800 jobs), government (103,800 jobs), retail trade (102,100 jobs), leisure and hospitality ( 85,700 jobs), and administrative and support and waste services (75,900 jobs).

The leading occupations among Hispanic or Latino workers include retail trade (13.2 percent), healthcare and social assistance (9.8 percent), government (9.5 percent), and educational services (9.2 percent). A larger percentage of Hispanic or Latino and African-American or Black workers are employed in low wage service sector occupations. According to 2020 Occupational Employment and Wage

Statistics (OEWS), provided by the Florida Department of Economic Opportunity (DEO), Broward County's leading service sectors occupations percentage of have median hourly wages under \$15.00, including Sales and Related Occupations (\$14.75/293,800 workers), Transportation and

## workers are employed

 in low wage service sector occupationsLeading service sectors occupations have median hourly wages under $\$ 15.00$

## EMPLOYMENT BY INDUSTRY

Table 3.2: Broward County Businesses and Activity by Race
Broward County's industrial base is largely comprised of service producing industry sectors which provide the majority of employment, including retail (12.5 percent), education services and health care and social assistance (20.8 percent), and professional, scientific, and management, and administrative and waste management services (14.1 percent).

An analysis of Broward County's industry employment by race shows significant disparities in employment among several of the leading industry sectors including educational services, professional, scientific and technical services, government, information, and finance and insurance. These industry sectors generally provide higher wages than lower-wage service sector industries such as accommodation and food services, retail, administrative and support, and waste management where both Black or African American and Hispanic or Latino workers are largely employed.

## MINORITY-OWNED BUSINESSES

According to the most recent 2017 U.S. Census Annual Business Survey, there are 13,236 minority-owned businesses in Broward County. There are 7,932 Hispanic or Latino businesses with 53,327 employees, and 2,259 Black or African Americanowned businesses with 12,293 employees.

Table 3.1: Broward County Businesses and Activity by Ethnicity

## IV. PUBLIC EDUCATION

According to the National Equity Project, educational equity means that "each child receives what they need to develop to their full academic and social potential." Equity in education is the process of reforming practices,

According policies, and procedures at the school and district levels to suppor to the Washingion academic fairness and inclusion and ensure that every child has
Center for Equitable the resources, teachers, interventions, and supports they

## Growth, education is one

of the most important

## long-term drivers of

 both economic
## c

 quality of life and build prosperity. In fact, access to high-qualitygrowth 8 equity recognized solution to the cycle of poverty. According to the Washington Center for Equitable Growth, education is one of the most important longterm drivers of both economic growth and equity. Education adds to human capital (the education, training, and health of workers) thereby increasing labor productivity and the value of the worker. The quality of education that students receive also directly correlates to their quality-of-life years down the road. Early education, in particular, has the power to shape a child's future. It is for these reasons that it's crucial for local educators to address any barriers young students face to succeeding in school.

Barriers to an inclusive education can affect groups based on race, gender, and many other factors. As such, equity measures are important in determining persistent learning issues and gaps that exist in local public education. Equity in public education means offering individualized support to students that addresses possible barriers such as poverty, housing conditions, family crises, mental health issues, hunger, and homelessness. Major education initiatives across the country support efforts to ensure quality teaching in every classroom; raise standards for all students; build systems to improve instruction; and significantly improve lowperforming schools.

## RACE/ETHNIC COMPOSITION OF THE STUDENT POPULATION

The analysis found the racial and ethnic make-up of Broward County Public Schools is more diverse than Broward county's overall population. This is attributed to a larger percentage of childbearing ages among the County’s Hispanic or Latino and Black or African American populations

Racial and Ethnic Make-up of Broward Public Schools

Source: U.S. Census, 2010 \& 2019 ACS 1-year estimates
Educational Attainment by Race, 2019

According to 2019 ACS estimates, Broward County's high school graduation rates have steadily improved over the past ten years with marked improvement among Black or African American and Hispanic or Latino students. Among Black or African American students, the graduation rate increased from 61 percent in 2010 to 86 percent in 2019. Among Hispanic or Latino students, the graduation rate increased from 75 percent in 2010 to 90 percent in 2019.

## Table 4.2: Broward County Graduation Rates by Race \& Ethnicity 2010-2019

| Year | White | Black or African American | Hispanic or Latino |

## FULL TIME INSTRUCTIONAL AND ADMINISTRATIVE STAFF

Creating educational equity in non-homogenous schools where students come from a variety of backgrounds requires that educators - instructional and administrative staffs - focus on "vertical equity", which assumes that students have different needs and require learning resources based on those understood needs. Because their families or schools might have very limited budgets, it is difficult to provide these students with equitable resources. Additionally, "at-risk" communities often have trouble keeping educators who can make a difference.

An analysis of Broward County's public schools found disparities in the proportion of inexperienced school administrators and instructional staff among high- and midrange minority schools and low- minority schools.

## SCHOOL ATTENDANCE

Current school attendance and other educational metrics require added scrutiny as the 2020 COVID pandemic created an unprecedented impact on Broward County's public schools and student education. According to Broward County's Public Schools 2020 Attendance Report, "average daily attendance" in Broward public schools showed little variation by student race and ethnicity. However,
"absences" during the 2020 school year does show significant disparities by race and ethnicity. "Unexcused" absences were significantly higher among Hispanic or Latino (51.8 percent) and Black or African American and students (66.4 percent) than White students (37.1 percent).

Broward County Schools Absences by Type and Race (2020)

[^4]
## STUDENT PARTICIPATION IN ADVANCED LEVEL COURSES

While the number of Hispanic or Latino and Black or African American students taking academically challenging Advanced Placement courses in high school has increased in recent years, the racial scoring gap on Advanced Placement tests continues to be large and in fact has increased in recent years. According to a 2020 report from the Education Trust, Black and Latino students across the country have unequal access to advanced coursework, which means they often miss out on vital learning opportunities that can set them up for success in college and careers.

According to Broward County Public Schools - Advanced Placement Report 2019-2020, the "rate of passing" AP exams shows parity between White (68.9 percent) and Hispanic (69.1 percent) students, but a significant disparity with Black students (46.5 percent).

## FLORIDA STANDARDS ASSESSMENT (FSA)

All Florida schools teach the Florida Standards in English Language Arts (ELA) and Mathematics. Student performance on the FSA provides important information to parents/guardians, teachers, policy makers, and the general public regarding how well students are learning the Florida Standards. FSA results are reported at the student, school, district, and state levels. After the Spring 2015 baseline FSA administration, the Florida Department of Education (FDOE) conducted the standard setting process to establish the cut scores for the performance levels, also called achievement levels, for each grade and subject.

For all grade levels and subjects, the minimum scale score in performance level 3 is identified as the passing score. Earning passing scores on the Grade 10 ELA and Algebra 1 EOC assessments is required for graduation with a standard high schoo diploma.

An analysis of FSA Score Trends FY 2015-2021 for Broward County schools found significant disparities among White, Hispanic, and Black students in both English Language Arts (ELA) and Mathematics at both the 3rd and 10th grade levels. Due to the cancellation of statewide testing in 2020, results were compared to scores from the 2018-2019 school year.

Table 4.3: Broward County FSA English Language Arts Passing Rate, 3rd Grade

[^5]
## PUBLIC SCHOOL GRADING SYSTEM

The School grades provide an easily understandable way to measure the performance of a school. Parents and the general public can use the school grade and its components to understand how well each school is serving its students. Schools are graded A, B, C, D, or F. There are four achievement components, four learning gains components, a middle school acceleration component, as well as components for graduation rate and college and career acceleration. Each component is worth up to 100 points in the overall calculation. There are four Achievement Components: English Language Arts (ELA), Mathematics, Science, and Social Studies. These components include student performance on statewide standardized assessments, including the comprehensive assessments and end-of-course (EOC) assessments. The component measures the percentage of full-year enrolled students who achieved a passing score. Four Learning Gains Components: These components are learning gains in English Language Arts and Mathematics, as well as learning gains for the lowest performing $25 \%$ of students in English Language Arts and Mathematics. These components include student performance on statewide standardized assessments including the comprehensive assessments and EOC assessments for the current year and the prior year. The components measure the percentage of full year enrolled students who achieved a learning gain from the prior year to the current year.

It should be noted, pursuant to Florida Department of Education Emergency Order No. 2020-EO-1, spring K-12 statewide assessment test administrations for the 201920 school year were canceled and accountability measures reliant on such data were not calculated for the 2019-20 school year. Additionally, in April 2020, the U.S Department of Education provided a waiver for requirements related to certain assessments and accountability that are based on data from the 2019-20 school year.

## PUBLIC SCHOOL GRADING SYSTEM FINDINGS

The State of Hispanic and Immigrant Broward report found that most of Broward County Public Schools graded as C or D are located in communities with high concentrations of Black or African American and Hispanic or Latino populations. This includes 22 of the 2021-2022 Lowest 300 Performing Elementary Schools on the state.

Broward County Public Schools Graded C \& D

## V. PUBLIC HEALTH

Equitable Health Care means that all individuals have access to affordable, high quality, culturally, and linguistically appropriate care in a timely manner. This includes health care quality, patient education and empowerment, health care infrastructure, health care policy, and program administration (National REACH Coalition).

Over the course of the COVID-19 pandemic, there has been a growing focus on its disproportionate impacts on people of color, particularly a availability of data to understand racial disparities has increased.
$\qquad$ Equitable Healih The Covid-19 pandemic has been exceptionally disruptive for

Care means that all from the Center for Disease Control (CDC) shows: individuals have access to

- Black people were more than twice affordable, high quality, culturally as likely to die from COVID-19 as White people;
\& linguistically appropriate care in a
- Indigenous people accounted for more than 56 percent of COVID-19 deaths in New Mexico (home to part

## lity: patient education \& empowern

$\qquad$ health care infrastructure; health care of the Navajo Nation), although indigenous
policy, \& program administration people were only 8.8 percent of the state's population;
(National REACH
Coalifion).

- Hispanic Americans between the ages of 40 and 59 had been infected at a rate five times greater than White people in the same age group, nationwide
- An important factor in COVID-19's disparate impacts is that a much higher proportion of minority group members have to live in overcrowded and/ or substandard housing. That problem compounds other disparate impacts of the pandemic--such as the facts that people of color are more likely to: (1) have "essential" jobs in crowded workplaces; (2) rely on crowded public transportation; and (3) suffer from pre-existing health conditions. Studies have linked many of those pre-existing conditions to substandard and overcrowded housing

## BROWARD COUNTY'S PUBLIC HEALTH CONDITIONS

An analysis of Broward County’s public health condition shows significant disparities among the County's White, Black or African American, and Hispanic or Latino populations

The leading causes of death in Broward County include heart disease, cancer, and cerebrovascular diseases. Significantly, African Americans and Hispanics are at risk for both heart disease and cerebrovascular disease. According to the National Institute of Health (NIH), African Americans and Hispanics are more likely than Whites to die after having a stroke. At risk population includes those with diabetes and high blood pressure, two disproportionate aliments associated with Black or African Americans.

[^6]According to the survey, the rate of births to obese mothers was also substantially higher among Broward County's Black or African Americans ( 33.6 percent) than Whites (19.4 percent). The rate of births to obese mothers was also higher among Hispanics or Latinos ( 22.6 percent) than Whites.

## HIV AND AIDS INCIDENCE

According to the Florida Department of Health, Bureau of Communicable Diseases, there are substantially higher HIV and AIDS infections and deaths among Broward County's Black or African American and Hispanic or Latino residents than Whites However, HIV diagnosis rate among Broward County's Black or African American population has decreased from 90.1 per 100,000 population in 2010 to 50.9 in 2019 The HIV diagnosis rate among Broward County's Hispanic or Latino population has increased from 30.8 per 100,000 in 2010 to 36.0 in 2019.

HIV Diagnosis Rate by Race (rate per 100,000 pop.)

HEALTH INSURANCE COVERAGE
According to the 2019 ACS estimates, the percentage of Broward County's uninsured Black or African American and Hispanic or Latino populations has decreased in the last five years. However, the percentages of the County's uninsured Hispanic or Latino (18.2 percent) and Black or African American (10.1 percent) populations far exceed the County's uninsured (5.9 percent) White population.

## VI. HOUSING

Equitable housing incorporates the values of inclusion, equal access to opportunity, and diversity in communities ensuring that all people - regardless of race, ethnicity, family status or disability - have a range of choices for where to live now and in the future.

The availability of quality affordable housing is critical in creating diverse and inclusive cities and counties. Affordable, safe, quality housing can provide the anchor for nearby jobs, education, transportation, and health care. This should matter to cities and counties, not just on equity grounds, but because healthier and more educated residents benefit the local economy by forming a more robust and productive workforce.

Housing affordability also affects educational performance and attainment Households with better affordability ratios generally have higher rates of savings, more cash, and/or higher levels of equity (in an owned home) that can be applied to education spending for their children, including university education costs. Lower housing cost-burden and higher quality housing leads to better family health outcomes. Households with lower cost burden rates have more income available for health care expenditures, including insurance. Families on the margin of home affordability are often forced to choose between health care and paying the rent or mortgage, and a single unexpected health expense can throw a family into foreclosure or eviction.

Northwest Gardens V, Fort Lauderdale - Fifth phase of the Northwest Gardens Sustainable Neighborhood project, which master plan.

Source: Helen Wolt/Sun Sentinel

The pre-COVID Affordable Housing Needs Assessments for Broward County completed by Jorge M. Perez Metropolitan Center (JPMC) documented excessive housing distress especially for low- and very low-income renters. Lower income renters comprise the vast majority of service workers in the industry sectors most impacted by the pandemic, including accommodation and food services, retail, and healthcare and social assistance. While some jobs are moving to remote, low-income workers, who are disproportionately people of color, are less likely to work from home and must commute daily to service jobs at fixed-site locations. In the post-COVID economy, it will be critical to provide safe, decent, and affordable housing opportunities in communities as close as feasible to where jobs are located.

According to UnidosUS, Hispanic households are facing growing housing insecurity due to the following conditions:

- Structural barriers to accessing housing assistance
- Work in jobs that pay little with few benefits and limited savings
- Excluded from federal COVID-19 relief efforts
- Rental costs rising faster than wages causing increased housing cost-burden

## HOUSING TENURE

Since the Great Recession, the homeownership rate has improved slightly However, the Hispanic homeownership rate is 49.3 percent compared to the White homeownership rate of approximately 74 percent. While Hispanics have made headway in homeownership gains over the past decade, growth has not been equal across the country or across Hispanic subgroups. Hispanic homeowners are not monolithic. Hispanic homeowners and renters in the U.S. come from over 20 Latin American countries, with different races and ethnicities, and socioeconomic and migration backgrounds.

According to 2019 ACS estimates, the overall homeownership rate in Broward County is 62.1 percent which is a historic low. Renter-occupied units have steadily increased since the Great Recession and now represent 37.9 percent of all occupied units. Renter-occupied units increased by 6.9 percent ( 16,775 units) since 2015

Table 6.1: Broward County Housing Occupancy 2015-2019

| Housing Occupancy | 2015 |  | 2019 |  | $\%$ Change |
| :---: | ---: | ---: | ---: | ---: | ---: |

ource: U.S. Census, 2019 ACS 5 -year estimate

## HOUSING UNITS BY STRUCTURE TYPE

According to 2019 ACS estimates, housing structures by type show little variation by race and ethnicity. However, Broward County’s Hispanic or Latino and Black or African American populations have a greater share of residence in small, multifamily structures of 3-49 units. This is significant, as small, multi-family structures are generally much older properties.

## Household Units by Race, 2019 (Percent Change since 2015)

$50 \%$

White alone, not Hispanic

Hispanic or Latino

[^7]
## AGE AND CONDITION OF HOUSING STRUCTURES

The provision of "safe, decent, and affordable housing" is an important responsibility of local governments. A healthy and sustainable community ensures the availability of safe, decent, and affordable housing. Safe and decent housing supports the health of its occupants and provides shelter from the elements, especially during and after disasters. This is especially important for lower income populations who do not have the financial means, income or resources to control for these necessities Significantly, the concentrations of older, unsafe housing structures in Broward County are found in less affluent communities that are already experiencing the health and economic impacts of the COVID-19 pandemic

## Age of Housing in Broward

[^8]
## COST-BURDENED HOUSEHOLDS

According to the 2018 Broward County Affordable Housing Needs Assessment the housing affordability demands in Broward County and its municipalities did not improve despite impressive post-recession job growth numbers and low unemployment. The study found 53.9 percent of Broward County households are cost-burdened making Broward County one of the most unaffordable places to live in the U.S.

The most critical housing problem in Broward County is the estimated 147,313 renter households who are cost-burdened and the 77,677 renter households who are "severely" cost-burdened. The significant growth of severely cost-burdened renters is most pressing problem due to three market conditions: 1) the increasing demand for renter housing throughout the City resulting in low vacancy rates and a spiraling increase in rent prices, 2) the lack of affordable rental housing production, and 3) rent prices are increasing faster than wages.

According to the JPMC's COVID-19 Community Distress Index (see COVID Distressed Index map), the highest levels of housing distress, including the highest concentrations of cost-burdened households, are found in lower-income Hispanic or Latino and Black or African American communities.

Cost Burdened Residents by Housing Tenure

## ENDING ACTIVITY

Recent analysis by JPMC of the post-COVID housing market has found affordable housing is disappearing from the market due to rapid appreciation. At every level, the housing crisis hits minority communities harder. As noted in the Nationa Association of Real Estate Brokers' "State of Housing in Black America" report, African-American home buyers are more likely to take out "nonconventional" loans, often from the Federal Housing Authority, which require smaller down payments and lower credit scores

In high-demand cities, homebuyers receiving housing assistance or nonconventional loans often lose out to cash offers or applicants with traditional loans. Black applicants are twice as likely to be denied home loans as white applicants. While many cities have programs to help veterans, minorities and lowincome families with down payments, housing costs in many cities are now so high that even a 3 percent down payment is out of reach.

According to Federal Financial Institutions Examination Council's (FFEIC) data for Broward County, 22.9 percent of Hispanic or Latino home purchase loans for the period 2005-2019 were "high cost" loans.

## VII. CRIMINAL JUSTICE AND SAFETY

Racial justice is the systematic fair treatment of people of all races that results in equitable opportunities and outcomes for everyone. A just and equitable criminal justice system allows all people to achieve their full potential in life, regardless of race, ethnicity or the community in which they live. According to the Opportunity Agenda, racial justice-or racial equity-goes beyond "anti-racism." An equitable criminal justice system should ensure that all individuals feel safe and secure in their communities and be administered in a fair and just manner with a commitment to equal treatment and accountability. As such, it is not just the absence of discrimination and inequities, but also the presence of deliberate systems and supports to achieve and sustain racial equity through proactive and preventative measures.

A "racial justice" framework can move communities from a reactive posture to a more powerful, proactive and even preventive approach. An equitable criminal justice system should also ensure that all individuals feel safe and secure in their communities and be administered in a fair and just manner with a commitment to equal treatment and accountability.

There are few areas of American society where racial disparities are as profound and as troubling as in the criminal justice system. In fact, racial perceptions of crime and race influenced policy development have been intimately tied to the development of mass incarceration. Despite substantial progress in achieving racial justice in American society over the past half century, racial disparities in the criminal justice system have persisted and worsened in many respects over this period of time. According to the 2014 Sentencing Project report, "Blacks and Latinos together comprise 30 percent of the general population, but 58 percent of the prison population". The research showed that some of the apparent progress in racial equality, in areas such as educational attainment, is in part a product of incarcerated African American men not being counted in household-based surveys.

Having a just and equitable criminal justice system at the local level also helps to ensure access to substance abuse and mental health interventions without justice involvement. Many behavioral health issues end up being addressed through the justice system, particularly local jails, because of inadequate capacity to intervene and treat them in the community. Typically, treatment and services may often come to juveniles through the justice system because of insufficient funding for community-based interventions.

## BROWARD COUNTY CRIME RATES

According to the 2019-2020 crime data report released by the Florida Department of Law Enforcement, Broward County's overall crime rate decreased in the past year. This includes the juvenile crime rate which decreased from 11.1 percent in 2010 to
5.8 percent tin 2019. The reduction in Broward County's Total Crime Index was also reflected in most municipalities. Municipalities with increases in their Total Crime Index included Southwest Ranches (47.4 percent index change), Wilton Manors (24.6 percent index change), Lauderhill (13.6 percent index change), and Lauderdale Lakes (3.1 percent index change).

[^10]
## BROWARD COUNTY DELINQUENCY PROFILE

According to the Florida Department of Juvenile Justice's 2020 Delinquency Profile Dashboard, Broward County ranked 4th in Juvenile intake-arrests (2,735 arrests) behind Hillsborough ( 3,483 arrests), Orange ( 3,400 arrests) and Pinellas (3,055 arrests) Counties. Juvenile arrests were down 61 percent in Broward County from 2015 due in a large part by the COVID-19 pandemic. Juvenile intake-arrests were down 54 percent statewide from 2015 to 2020

Juvenile arrests in Broward County by race show a significant disparity between White and Black. In 2020, 71 percent $(1,955)$ of juvenile arrests were Black compared to 11 percent ( 310 arrests) of White. Hispanics comprise 16 percent (449) of arrests. Statewide, 51 percent of juvenile arrests are Black, 33 percent white and 16 percent Hispanic youth.

A further analysis of juvenile arrest activity in Broward County, shows the highest volume of juvenile arrests occurred in Broward County zip codes with high concentrations of Blacks or African Americans.

Broward County: Juvenile Hispanic or Latino Arrest 2019-2020 by Zip-code

## VIII. VOTER ENGAGEMENT

Voting is the most basic right in our democracy, but too many people, especially people of color and Native Americans, are often locked out of the process through Jim Crow type voter suppression laws. As the cornerstone of American democracy, a fair and equitable election system would remove persistent barriers to voting and work towards a strong and modern voting system where all eligible citizens are motivated to vote, can do so with ease, and can reasonably trust that election outcomes are legitimate. From an equity standpoint, voting rights must be systematically protected, promoted, and practiced

The on-going struggle for racial justice has been put to the test in recent months as the U.S. Supreme Court has taken up arguments in a case in which the State of Arizona's election rules adversely and disparately affect Hispanic, African American, and Native American voters in violation of Section 2 of the Voting Rights Act of 1965. Sadly, these recent election bills would not have seen the light of day had the U.S. Supreme Court not dismantled the heart of the Voting Rights Act in the 2013 Shelby County v. Holder Case. The Shelby decision made it easier for states to pass voter restriction laws after the high court removed the "preclearance" provision from the Voting Rights Act. Under preclearance, a state with a history of racial discrimination in elections had to get permission from the federal government for instituting any changes to how they run elections.

The Shelby decision coupled with the results of the 2020 election have ignited a wave of GOP state legislature election bills. At last count, 361 bills have been filed

in 47 states that would limit mail, early in-person, and Election Day voting with such constraints as stricter ID requirements, limited hours, and narrower eligibility to vote absentee. In Florida, H.B. 7041 limits the use of drop boxes and includes additional ID requirements for mail voting. The bill will also ban giving out food and drinks to Voting is the voters near a polling place.

## BROWARD COUNTY VOTING

The Broward County Supervisor of Elections oversees 577 precincts and over million voters. The County's total voting age population has increased by 20.5 percent since 2008 (192,476 voters). However, the County's White voting age population has decreased by 8.2 percent (48,828 voters), while the County's Hispanic or Latino and Black or African American voting age populations have increased by ( 98.8 percent/141,935 persons) and (46.7 percent/ 98,569), respectively.

Table 8.1: Broward County Voting Age Population

| Voting Age Population (Eligible to Vote) |  |  |  |  |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

Source: Broward County Supervisor of Elections
Voter turnout in Broward County has significantly increased in recent years by race and ethnicity. The Hispanic or Latino voter turnout rate of 75.8 percent in the 2020 national election far exceeded the previous three national elections. The Black or African American 74.2 percent voter turnout rate in 2020 was the highest turnout rate since the election of Barack Obama in 2008. Significantly, Black or African American voter turnout in the 2018 midterm election far exceeded the previous two midterm elections in 2010 and 2014.

## VOTER ENGAGEMENT AND EQUITY OUTCOMES

As previously noted, a fair and equitable election system is the cornerstone of American democracy. The disparity and equity findings of this

## Hispanic or

 report regarding the economy, education, public health, housing
## Latino voter furnou

 and criminal justice can only be fully addressed by policy rate of $75.8 \%$ in the 2020 national election far exceeded the previousdecisions at the local, state, and federal levels ofgovernment that remove structural racism and create effective community development delivery systems at the local level.

The State of Hispanic and Immigrant Broward report lays the groundwork for the Broward County Equity Initiative which will address the findings and policy implications of this report. The desired equity outcomes will ultimately be achieved through effective policies that can only come about when voters of color insist on meaningful change through purposeful legislation.

The Broward County Equity Initiative provides an opportunity for leaders to hold our community to a higher standard in matters of racial equity and inclusion As noted in the Introduction and Executive Summary, the purpose of the State of Hispanic and Immigrant Broward report, produced in tandem with the State of Black Broward, is to provide a holistic and integrated assessment of existing disparities and inequities in Broward County that will serve as the analytical underpinnings for future policy discussions and direction.

The State of Hispanic and Immigrant Broward and State of Black Broward reports found clear evidence that disparities and inequities exist in many forms in the County, including essential community functions. Broward County's racial and ethnic inequities and disparities encumber economic opportunity, educational attainment, quality healthcare, affordable housing, and equal justice among Black Hispanic, and immigrant populations. The two reports are an important first step to align efforts towards applying an equity lens to address the imbalanced economic and social systems in a manner that leads to long-term, sustainable, equitable access for generations to come in Broward County

The path forward will be guided and supported by community input at all levels with the objective of advancing equity and inclusion through an actionable policy ramework. Following the roll-out of the reports, we will work to create spaces and opportunities for all business, government, faith, and community groups, as well as our families, to participate and hold Broward County accountable in matters of racial and ethnic equity and inclusion. These efforts will provide context for the Broward Equity Plan of Action, our forthcoming and final report.

The work in the months ahead is intended to sustain resident empowerment and equity and build social cohesion. The Broward County Equity Initiative will be a tool for community groups that seek to holistically integrate planning, community education, advocacy, and resident support in Black, Hispanic and immigrant communities and neighborhoods across Broward County.

Ultimately, our hope would be that collectively, we - business, government, faith, community groups, and families- can truly advocate for game-changing strategies n Broward County's communities to address social and economic barriers impacting our families and provide the resources necessary to help families achieve long-term, positive life outcomes.

You can show your active support in many ways:

- Share the report with others
- Invite a deeper conversation on the reports' findings
- Engage in existing networks of change that are of interest
- Support local organizations engaged in racial equity work

If you are interested in actively supporting or would like more information, you may reach us by calling 954.964.8884 or visiting www.hispanicunity.org
